How is CO2 reduction calculated?

We compare your chosen transport method against the average emissions of a standard petrol car for the same distance.

What is the 'Dynamic Hub'?

It's your central command. It tracks your live movement by default, but turns into a journey planner when you enter a destination.

Why isn't my trip tracking?

Ensure 'Always Allow' location permissions are enabled in your phone settings so we can track you even when the screen is off.
